Source Water Protection

South Georgian Bay Lake Simcoe Region

Update on Nitrate at the Midhurst Valley Drinking Water System

Bill Thompson

Lake Simcoe Region Conservation Authority

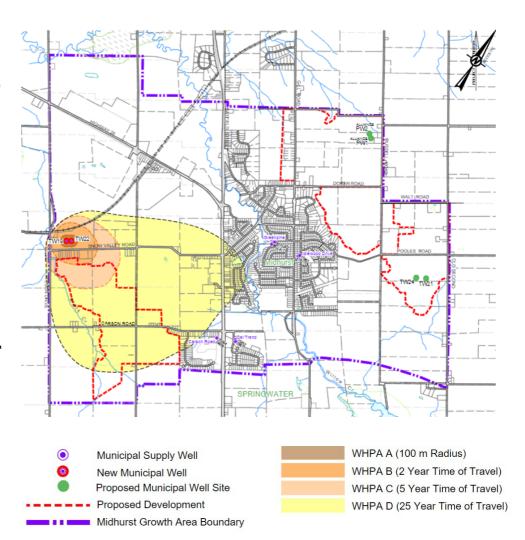

Water

is life.

Protect
Yours.

Background

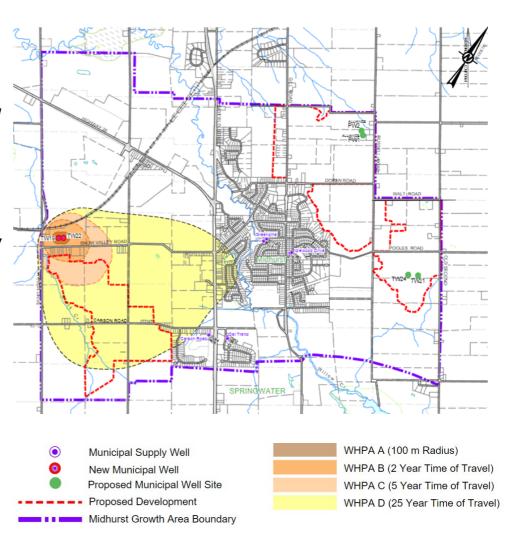

- New wellfield referred to as the Midhurst Valley Wellfield.
- Water supply source is groundwater.
- Was integrated into the Assessment Report, Township of Springwater Chapter in 2022
- Came into service in 2024

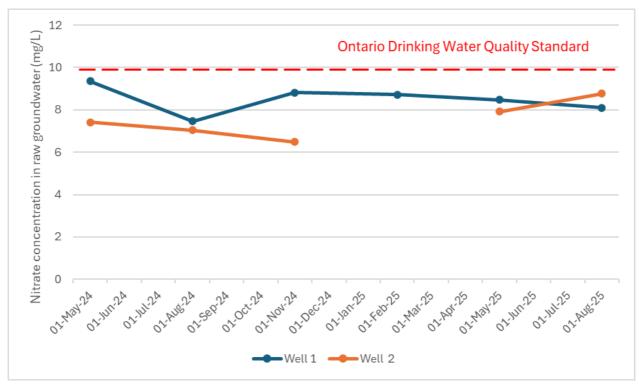

Background

- Nitrate concentrations were elevated, but below the Standard
- Nitrate was assumed to be due to historic source, agricultural
- Was assumed that nitrate would decrease as development proceeded

Recent nitrate status

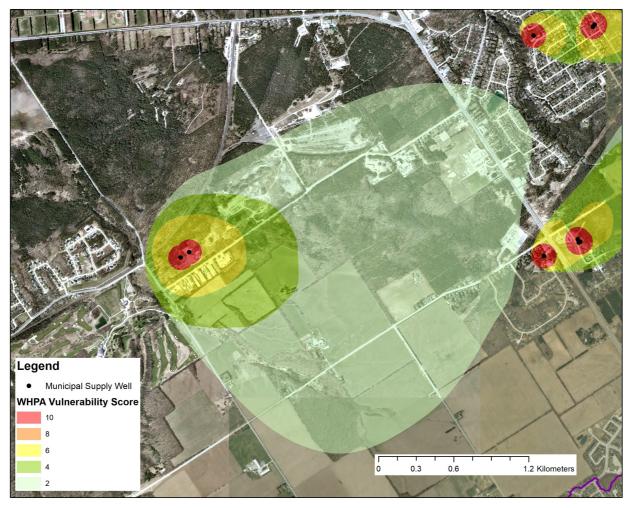

- · Remains below standard
- Well 1 stable to decreasing
- Well 2 variable

What is an 'Issue'?

- A drinking water Issue exists if:
 - A contaminant in a well exceeds the Ontario Drinking Water Quality Standard; or,
 - It is increasing such that it is projected to exceed the Standard
- If an Issue is identified
 - An Issue Contributing Area (ICA) needs to be identified
 - All low and moderate threats are to be addressed through policy

Midhurst Valley vulnerable areas

Summary

- Nitrate remains elevated, but below the Standard
- Not clear if nitrate concentrations are increasing or not
- If concentrations increase, an Issue may be necessary
- SPA staff will continue to monitor

Thank you
